

# TASSTA's PTT AND EMERGENCY SOLUTION

UNIQUE FOR THE HEALTHCARE INDUSTRY  
USED OVER LTE AND WIFI NETWORKS.

## SITUATION

Hospitals and medical centers are 24/7 facilities where there is continuous activity to care and treat patients. The world's leading hospitals are always recognized for high-quality patient care - that is the barometer for excellence. Many larger organizations now have multiple locations world-wide as they begin to offer preventive, holistic services as opposed to the traditional, reactive care to treat patients. In 2017, one of the largest medical centers treated 1.5 million people from 130 countries.

TASSTA's mission is to support these leading hospital and medical centers customers by providing a simple, easy-to-use communications system that provides push-to-talk and emergency features for hospital staff and administrators. This product facilitates instantaneous communications between personnel and also Emergency features that can alert administration and security staff in case of some type of incident. Keeping Hospital personnel safe and in-touch with Security and/or First Responders is the function of TASSTA's product line.

## MARKET CHALLENGES

Delivering professional and world-class patient care requires top-notch doctors, nurses and other support personnel. In addition to the front-line expertise, it is also important to have trained, experienced operational personnel with the right communication tools to ensure the hospital is providing a superb experience for patients.

Operational staff in maintenance, housekeeping, transportation and security needs a tool that can

facilitate instant and effective communication to perform their functions. Traditionally, single-purpose radios have been provided to such staff as their communication device.

TASSTA's T.Flex now turns any Android, Windows or iOS device into a radio, providing push-to-talk capabilities over any cellular or WiFi network and taking advantage of the device's intelligence to provide advanced emergency and dispatch services.
